Executive Summary

African-American children in Maryland are in out-of-home placement at 5.3 times the rate of white children, more than 50 percent higher than the national gap. African-American children are being removed from their homes at 3.5 times the rate of white children. These disparities exist despite no evidence of any difference in actual maltreatment rates. Solutions include: Alternative Response; Cultural Competency; and Family Team Decision Making.

The Disparities

Out-of-Home Placement

African-American children in Maryland make up one third of the State’s children, yet they are almost three-quarters of the children in out-of-home placement due to maltreatment, as reflected below.

Population vs. Placements

Home Removals

Annually, African-American children account for almost two thirds of the children entering into the child welfare system.

Possible Explanations

There is no greater incidence of child abuse or neglect in African-American families. The Third National Incidence Study, which examined the incidence of child maltreatment in a nationally representative sample of 42 counties, did not find racial differences in actual child abuse or neglect.\(^4\)

These findings suggest that the overrepresentation of African-American children in the child welfare system is not attributable to higher rates of maltreatment in this population but instead to factors related to the child welfare system itself. Indeed, a report by the U.S. Government Accountability Office notes that, “at each decision point in the child welfare process the disproportionality of African-American children grows.”\(^5\) This means that the solutions lie within the child welfare system to ensure that, at each stage of the process, racial inequities are addressed.

Recommendations

1. Alternative Response: Depending on the risk of harm, this allows workers to refer families to community services, suggest child welfare and family support resources or fast track extreme cases of maltreatment.

2. Cultural Competency Training: Workers are trained to be aware and respectful of different values, beliefs, traditions, customs and parenting styles and make adjustments accordingly.

3. Family Team Decision Making: This allows workers to help families form supportive teams of relatives and friends, thereby taking more complete advantage of the extended, informal networks in the African-American community
